Pioneering strategies in the digital world. Insights from the Axel Springer's case

Abstract

Digital technologies present some distinctive characteristics: they simultaneously enable pervasive connectivity, immediacy of interactions and wide access to data and computing power. Based on a detailed historical analysis of Axel Springer, we suggest that pioneering strategies in new markets created by the diffusion of digital technologies is negatively moderated by the fit between firms' legacy core capabilities and those required to enter the new market. We then show that pioneering strategies in non-core legacy markets are instrumental in creating the capabilities necessary for the sustainability of first-mover advantages (FMA) in the legacy core markets. Finally, we show the role of managerial cognition as a key individual-level enabler in achieving pioneering advantages.

Introduction

In just a few years the rapid diffusion of digital technologies translated into significant structural change in many industries. From a strategy perspective, one of the most prominent consequences of this digital transformation is the seemingly considerable erosion of opportunities for first-mover advantages (FMA)¹, especially for incumbents. Defined as 'the performance gain that a firm attains from being first to market in a new product category, once other effects (namely, firm resources, lead time) have been controlled for' (Suarez & Lanzolla, 2007: 382), FMA have typically rested on early entrants' superior resources and capabilities and/or their ability to set appropriate isolating mechanisms (Lieberman & Montgomery, 1998). Yet, the applicability of the extant FMA theories has been questioned in the digital world with some authors even

questioning the possibility to achieve pioneering advantages altogether (e.g., Porter, 2001).

In this paper, we seek to provide evidence on some of the conditions under which FMA can be sustained in the digital world. Our contribution is based on a comprehensive historical analysis of a prominent counter-case (e.g., Oshri, de Vries & de Vries, 2010; den Uijl & de Vries, 2013). Specifically, we investigate how the leading German publisher Axel Springer purposefully pursued pioneering strategies in the wake of the pervasive diffusion of digital technology in the media industry. Our research context is salient because the media industry has been profoundly affected by the last decade of digital transformation (e.g., Benner, 2010; Gilbert, 2005; 2006). Digital technologies present some unique characteristics when compared to any other technology: they enable, at the same time, pervasive connectivity, immediacy of interactions and access to a wide range of data and computing power. For their simultaneous effect, these characteristics make digital technologies rather unique and their role in the effectiveness of market pioneering strategies has not yet fully explored and understood.

Fully exposed to the pervasive diffusion of digital technologies, Axel Springer has managed to progressively transform in a few years into a ‘digital powerhouse’ (*Wall Street Journal* online, December 2013) and ‘a bright spot in the European media landscape’ (*Bloomberg Business Week* online, April 2013). From our historical analysis we derive three contributions for FMA research. First, analysing the performance of Axel Springer’s different pioneering efforts in different markets created by the diffusion of digital technologies, we found that they were more sustainable when leveraging the core legacy capabilities – e.g., journalism – rather than at the periphery. Our analysis suggests that the diffusion of digital technologies does not necessarily

influence how much a firm's core capabilities can be stretched and that FMA is better understood as bounded by the specific legacy core capability domains.

Second, we found that pioneering efforts in peripheral capability domains were nevertheless very important for the long-term sustainability of FMA in the legacy core business. They were, in fact, functional to the development of those knowledge integration capabilities (both at the management cognitive level and at the organizational- level) necessary to dynamically adapt to the new connected 'ecology' enabled by digital technologies. Lastly, our historical analysis suggests that the Axel Springer senior management's conceptualization of the applicability scope of digital technologies (e.g., Helfat & Peteraf, 2014; Jones, Ghobadian, O'Regan, & Antcliff, 2013) had profound implications not only in shaping which pioneering strategies to launch, but also on their performance.

The paper proceeds as follows. We first present the theoretical background of our historical analysis by reviewing the relevant literature on FMA and discussing the uniqueness of digital technologies. Next, we present our findings organized in three main historical phases. Finally, we discuss the implications of our study for FMA theory and for managerial practice as well as proposing directions for further research.

First mover advantage theory and (digital) technological change

Strategy researchers have long been interested in understanding how firms can time their entry into a new market in a more effective way so as to gain some kind of FMA. To date, the literature on FMA has paid attention mostly to three important themes (Fosfuri, Lanzolla & Suarez, 2013): 1) the mechanisms through which early entrants might achieve and protect FMA (e.g. Lieberman & Montgomery, 1998); 2) the micro

and 3) macro conditions enabling or disabling firms' efforts in pursuing FMA (e.g. Suarez & Lanzolla, 2007; 2008).

The first stream has been historically concerned with the identification of drivers that firms can strategically manipulate to gain early-mover advantages when entering new markets. In this respect, FMA research has developed several classifications of these drivers (e.g. Day & Freeman, 1990; Golder & Tellis, 1993), generally in the form of 'isolating mechanisms' (Rumelt, 1987) protecting firms' pioneering advantages. Arguably the most widely accepted one is Lieberman and Montgomery's (1988) distinction of isolating mechanisms into three categories: the pre-emption and control of valuable scarce resources, the development and retention of technology leadership, and the creation of significant switching costs for customers/buyers.

Scholars focusing on micro-conditions have instead studied the strength of a firm's resources and capabilities relative to its competitors (e.g. Giudici & Reinmoeller, 2012; Teece, Pisano, & Shuen, 1997) as a key antecedent of its ability to derive FMA. For instance, firms with resources such as relevant prior experience in a given technology (e.g. Klepper & Simons, 2000) or foreign market (Tan & Vertinsky, 1996) as well as strong R&D (e.g. Schoenecker & Cooper, 1998) were all found to be more likely to build isolating mechanisms and to enjoy FMA opportunities. Finally, macro-level FMA research has investigated how different environmental contingencies influence isolating mechanisms and thus enable (or disable) FMA. The relevant literature here includes variables such as appropriability regimes (Teece, 1986), government regulation (e.g. Frynas, Mellahi & Pigman, 2006; Nehrt, 1998), industry or market characteristics (e.g. Dobrev & Gotsopoulos, 2010; Folta & O'Brien, 2004) as well as the presence of an efficient market for technology (Arora, Fosfuri & Gambardella, 2001). Importantly, whereas these contingencies have generally been studied at the time

pioneers enter the market, Suarez and Lanzolla (2007, 2008) proposed that the pace of technology evolution and the pace of market evolution act as two temporally relevant enablers (disablers) of FMA.

At the macro-level of analysis, the nearly exclusive focus on initial technology performance conditions and on the subsequent pace of change in extant FMA research (e.g. Bohlmann, Golder & Mitra, 2002; Christensen, Suarez & Utterback, 1998; Lanzolla and Frankort, 2016) represents perhaps too much of a stylization of the characteristics of digital technology which present at least three distinctive features: they enable, at the same time, pervasive connectivity, immediacy of interactions and access to a wide range of data and computing power. For instance, digital technologies have facilitated the creation of a common (digital) denominator underlining products, services and processes. In the past, for instance, music companies, publishers and camera producers operated through ‘specialized’ technologies. Publishers were associated with paper and printing technologies; music companies with vinyl disc or magnetic tape technologies; camera producers with chemistry and physics. In the past, telephones were used to make (telephone) calls, portable stereos were used to play cassettes and one could not use a radio to display pictures or make a telephone call. The pervasive diffusion of digital technologies has made it possible to overcome several of these symbiotic relationships between technologies and industries; relationships that had previously been the sources of entry (and exit) barriers. Furthermore, the process of digitizing once separated products, services and processes has also changed the sources and amount of available information that are now (potentially) immediately available and analysable.

With the rapid advent of digital technology, influential voices have argued for the near-end of FMA. From Michael Porter (2001) criticizing FMA as a myth to Rangan

and Adner arguing that ‘managers should not overrate the importance of early entry and the durability of the advantages it might bring’ (2001: 44), strategy researchers have generally agreed that FMA opportunities are rather limited and difficult to sustain in digitally-enabled environments (e.g. Giachetti & Marchi, 2010).

The case of Axel Springer appears to be at odds with such findings. A long-standing leader in the European publishing industry, the company’s pioneering efforts vis-a-vis the media industry digital transformation (e.g., Gilbert 2005, 2006) were overall successful. As a point of reference, Axel Springer managed to grow its revenues and EBITDA from digital media activities from near-zero in 2001 to about 50 and 60 per cent, respectively, in little more than a decade, while reinforcing its market share and economic performance. We argue that the analysis of Axel Springer’s digital transformation and pioneering efforts is likely to nuance FMA research and shed more light on the antecedents of successful pioneering efforts in the new digital markets.

The case: Axel Springer’s pioneering strategies and digital transformation

At the time our main historical analysis starts – the end of 2001 – Axel Springer was not shielded from the industry’s declining dynamics, exacerbated by the severe slump of the economy at the turn of the millennium and increasing uncertainty following the 9/11 terrorist attack. The company had just announced its first-ever loss, of around € 200 million, and the promotion to CEO of the 39-year-old Mathias Döpfner from his previous positions as member of the management board and head of the newspaper division.

Amid economic slowdown and digital change, Axel Springer had been impacted by flat growth in the European publishing industry and a decline of its core German market,

with advertising revenues particularly impacted. For example, between 1999 and 2002 newspaper sales in Germany, which previously boasted one of Europe's highest newspaper circulation rates per capita, dropped by 6.2% (see Table 1), with the total market value of the publishing sector down 3.5%, from € 34.0 billion to € 32.8 billion.² At the same time, advertising revenues had declined for the first time in 30 years across all channels, with print media (-9.2%), newspapers (-10.5%), job recruitment ads (-18.8%) and national classified ads (-27.4%) hit badly.

Given these characteristics of our setting, we argue that Axel Springer's case represents a quasi-ideal natural experiment (Diamond & Robinson, 2011) to investigate what mattered for its economic renewal and for the sustainability of FMA in the wake of the rapid diffusion of digital technologies. Below, we describe our findings on Axel Springer's pioneering strategies and digital transformation in three distinctive temporal phases. Appendix 1 and Appendix 2 present the historical record of Axel Springer's major corporate development initiatives within the timespan of our analysis. Unless otherwise specified, our comprehensive analysis is mostly based on Axel Springer's Annual Reports and Investor Relations documents for the 2001-2013 period.³

Phase 1 - Digital as supporting infrastructure (end of 90s to 2005)

Cashing in on traditional publishing (the 1990s up to early 2000s)

A traditional newspaper giant with revenues of nearly € 3bn, in 2001 Axel Springer was organized into five main divisions: newspapers, magazines and international affairs, books, electronic media, and printing. Feeling the increasing pressure on its business of digital transformations, Axel Springer embarked on several strategic initiatives. First, like many other competitors, the company was trying to leverage the rising convergence

between analog broadcast media and the Web to expand the strength of its legacy brands in Germany and penetrate more international markets. Second, from a value-chain perspective (Porter, 1985), digital technology was mostly conceptualized as the supporting infrastructure for distribution and for marketing purposes. However, this area was not seen as a key strategic priority. For instance, AS Interactive subsidiary – established in 1988 to sell ads for German online portals and to provide web services for advertising on the company’s many magazines and newspapers had been kept relatively small during the 1990s. Its involvement in content creation had also been rather limited to protect ‘the traditional spheres of responsibilities of the editors/journalists and the layout/design/production staff’ (Weber, 2000: 11-15).

Third, outside the more traditional core publishing legacy business areas, in 2001 Axel Springer had started investing in other markets opened by the diffusion of digital technologies. For instance, in 1999 it had formed a (short-lived) joint venture with Infoseek Corporation, Holtzbrinck and Deutsche Telekom to launch the web search website *Infoseek Germany*. Other exploratory investments included the portal for exclusive properties *PropertyGate.com* and the website for real estate marketing services *Immonet.de* – both taken over fully in 2001. Finally, the company directly operated a number of other websites in support of its print publications such as *Abendblatt.de*, *Bild.de*, *Welt.de* (newspapers), *Allegra.de*, *Autobild.de*, *Familie.de*, *Yam.de* (magazines), *Berlinl.de* and *Finanzen.net* (services). All these websites – with the exception of *Allegra.de* – were experiencing significant traffic growth at the end of 2001.

Despite all these early investments, at the turn of the century Axel Springer’s digital presence was rather limited. Total revenues of its Electronic Division were just € 88 million, mostly in the home German market, and down from € 108 million in 2000,

with a negative EBITDA of -€ 25 million. Not surprisingly, the company was regularly criticized by industry commentators, with the *Handelsblatt* depicting it as ‘completely underdeveloped... with regard to electronic media’ (May 1999),⁴ the *Die Woche* remarking its ‘chaotic web-sandbox’ (May 2000)⁵ and the German edition of the *Financial Times* regarding it as ‘a mere internet midget’ (October 2000).⁶

The dawn of the Döpfner’s era: restructuring the core publishing business (2002-2005)

Döpfner’s first strategic move at the helm of Axel Springer was to articulate his vision for the company’s restructuring and digital transformation. In December 2001, he outlined the key objectives of Axel Springer’s strategy for the new century as: 1) Market leadership in its German-language core business; 2) Internationalization; and 3) Digitization (Figure 1). Yet, crucially, digital technologies were still mostly conceived in terms of distribution and marketing potential: ‘*Access to video and written information is the basis for creating and successfully marketing cross-media products of the future: digital products for mobile communication devices, Internet portals, and interactive TV*’,⁷ Döpfner observed at the time.

Between 2002 and 2005, he designed and implemented an intensive restructuring programme, divesting businesses with unsatisfactory profit potential or lack of strategic significance. He also reduced the employee count from 14,069 to 10,700, with nearly € 250 million of savings. In 2002, Axel Springer started to re-focus on its legacy publishing business and its core competences in newspapers, magazines and digital retail channels. Resources were consolidated wherever possible, including the pooling of the operations between different newspapers. The technical capacities of printing plants were expanded and a number of new publications were launched either ex novo or through acquisitions. At the same time, the company pursued a systematic expansion

of the circulation of existing publications, trying to protect the market leadership of key brands such as the *Bild* and *Maxim*. A similar approach was deployed to increase the penetration of existent digital portals in the home German market that still accounted for approximately 100% of revenues. Additional attention was then put on increasing the company's overall logistics quality and customer service support. Despite very challenging economic conditions, Döpfner's plan seemed to progress well from the outset and, by the end of the year, the company had returned to profitability.

In 2003, Axel Springer's turnaround programme progressed. The restructuring of the core business accelerated with several important divestments: these included the whole Book division – sold at the beginning of 2003 to Random House in the wake of rising rights costs; the press logistic service provider *Overbruck*; and stakes in TV production companies. In the same year, Axel Springer launched eight new publications and entered the Polish and Russian markets. Investments in digital ventures were still rather limited and mostly aimed at consolidating existing online products. The only relevant exception was the launch of *Newsstand.de* as a central platform for the company's newspapers and magazines.

In 2004, the consolidation of the core business continued and international efforts increased. In Germany, Axel Springer launched what was arguably the first-ever digital TV guide, *TV Digital* that rapidly achieved a circulation of 1.3 million copies. The company also acquired a 30% stake in *Pin Group*, the second-largest mail handler in Germany behind Deutsche Post. The goal was to expand the company's physical distribution channels to facilitate direct contact with customers. On the digital side, it acquired a 49.9% stake in *StepStone*, the second-largest German Internet platform for classified jobs advertising, to add to its portfolio in real estate (with *Immonet.de*) and cars (with *Autobild.de*). At the end of the year, the company declared that it had

concluded its restructuring programme and reported an exceptionally good annual performance with the highest EBITA in its history at € 336 million.

The year 2005 represented a record year of consolidation. EBITA topped € 338 million, advertising and circulation revenues rose by 2.4% to € 2,165 million, net income grew by 56% to € 231 million and the share price rose to € 108 (+26%), with earnings per share of € 7.38, the highest ever in the company's history. All the major corporate development initiatives launched in the previous couple of years showed robust performance, particularly *TV Digital* whose circulation rose to 1.7 million copies, and double-digit growth in the number of visits to all the classified advertising portals. However, Axel Springer's digitization strategy also suffered a major setback when the German Federal Cartel Office rejected the company's friendly takeover offer for *ProSieben Sat.1 Media*, a German mass media company with operations in commercial television, premium pay channels, radio stations and printing. This investment – that followed the acquisition of a small stake in 2000 – had been envisioned as central in the cross-channel integration of the company's digital operations. At the end of 2005, the board formally reinforced the emphasis on internationalization and even more on digitization as the two key priorities for the future.

Phase 2 - Digitization intensifies: digital as a pervasive transformational force (2006-2012)

The failed takeover of *ProSieben SAT.1 Media* forced Axel Springer's top management team to reconsider its priorities in digital. Döpfner made clear the rising importance of digitization, observing: '*Online investment is assuming an increasingly greater priority in our strategic considerations. The transfer of existing brands, content expertise and*

*customer groups to the digital world is without question our most important challenge.*⁸ From 2006 onwards, the idea of exploring novel ‘online business models’ entered into the corporate language alongside renewed commitment towards the digitization of the core business in newspapers, magazines and television. The resulting strategic initiatives were rather broad in scope. On the one hand, they included exploitative investments in opening new digital sales channels for existing brands, in expanding online classified advertising and in leveraging printed editorial content via multimedia channels. On the other hand, Axel Springer sought exploratory investments in the development of new digital business models such as search directories, electronic TV guides, e-commerce, Internet television and blogs.

There was also renewed attention towards international markets with the announcement of a roadmap for online acquisitions abroad. Five investment criteria were articulated: 1) Strategic fit, i.e. the possibility to provide leverage for existing content; 2) Proven and scalable business models only; 3) Clear path to profitability or already profitable businesses; 4) Experienced management and credible commitment; 5) Reasonable valuation.

Overall, between 2006 and 2012, Axel Springer completed several acquisitions for a total value of approximately € 1,250 million (see Appendix 1 for a detailed analysis of its corporate initiatives). In the period, its top 10 acquisitions delivered very positive performance including 15% growth in market share, 29% rise in revenues and 48% growth in EBITDA since acquisition.⁹ The company’s digital media revenues skyrocketed from € 24 million to € 1,231.4 million and its digital media reach rose from a mere 3.4 million unique visitors to 59.1 million. The Digital Media EBITDA also improved from € 1 million to € 242.9 million despite the ongoing financial and media industry crises.¹⁰

Institutional barriers to growth: Seeking opportunities in digital (2006-2007)

In 2006, Axel Springer invested more than € 60 million in organic growth to expand its newspaper, magazine and online offering (see Appendix 2 for a detailed description of all the growth initiatives in 2006). It managed to post an EBITA close to € 340 million, reinforcing its position as the most profitable publishing house in Germany. The share price rose once again by 26% bringing the company's total stock market value up by nearly 60% in two years. Over the year, Axel Springer launched international editions of several of its existing publications in many Eastern European countries. It also acquired a 25% stake in the leading Turkish television group *Doğan TV* and a 25.1% stake in *Polsat*, one of the two largest private television groups in Poland. Investments in the German market were more digitally-orientated. Key moves included the expansion of multimedia content (podcasts, audio, video) for its magazines' portals; the acquisition of a 74.9% stake in *Idealo*, a profitable online price search engine; the increase up to 100% of its equity interest in *Immonet.de*, at the time the number two portal in its segment.

In 2007, the commitment to the digital transition was further accelerated by another negative institutional decision. Anticipating the privatization of the postal market, in 2004 Axel Springer had invested in the *PIN Group* joint venture. However, in an attempt to preserve the monopoly of Deutsche Post, the German government decided to approve a mandatory minimum wage of € 9, well above the expected € 7.50. Döpfner and the board, judging the investment as a dead end, wrote it off completely and also decided to sell Axel Springer's stake in *ProSieben SAT.1 Media*. These events had a profound impact on the company's stock price which tumbled from € 136.45 to € 98.00 – partly due to the beginning of the financial crisis – despite another record EBITA of

€ 421.7 million. It also re-shaped how the senior management team envisioned the company's growth path. Döpfner observed that: *'The case of PIN taught us two things: we need to focus even more on our core business and segments devoid of political influence. And future growth is to be found in digitalization and our activities abroad. [...] This means that the Internet offers more than simply future hope for Axel Springer; our web portals are already operating as concrete businesses. Our objective is clear: we want to realize a new dimension in the development of the company through digitization'*.¹¹ Following this realization, Axel Springer decided to invest € 86.4 million in online domains. The new digital strategy was purposefully aimed at transforming the company from a print publishing house to an integrated multimedia group. It was formalized as being based on three core areas of competence: Content and Brands; Marketing; Classified Ads and Marketplaces.

In the first competence area, the company engaged in several organic growth-orientated projects – such as the launch of new magazines and the creation of new ventures focusing on digital services – and also acquired well-positioned, profitable digital companies (see Appendix 2). A major step was the progressive acquisition of 68.2% of *AuFeminin.com*, a leading European web portal for women. The deal also included established server technology for online advertising, known as *SmartAdServer*. In the second competence area, important marketing-orientated investments involved the acquisition of 60% of *Zanox.de*, a service provider for performance-based marketing with a strong internationalization focus, and the founding of a premium marketing entity, *First Media*, to improve the online presence of its newspapers. Recognizing the criticality of valuable content for digital media products, the company then launched *Axel Springer Digital TV* with the goal of producing moving pictures

content for websites as well as creating and operating interactive television programming.

Finally, in the third competence area, investments developed along three lines. First, Axel Springer further expanded its online presence in the job search market with the acquisition of the Austrian portal *Jobfinder.at* and the launch of the new portal *Arbeiten.de* in Germany. It also acquired the German real estate portal *Wohnfinder.de*. Second, the company strengthened its finance coverage online by increasing its stake in *Smarthouse Media* which operated the portal *Finanzen.net* and acquired a majority stake in *Wallstreet: Online* and *Wallstreet: Online Capital*, respectively the second-largest German portal for financial information and one of the leading financial brokerage portals. Third, it piloted new e-commerce models by launching the online electronic store *Myby.de* via a 25.10% joint venture with Arcandor and by reinforcing a previously acquired minority position in the Internet media retailer *Buecher.de*.

In the second half of 2007, Döpfner outlined his new goal of generating more than € 400 million in online business with EBITDA margins of at least 20% by 2010. A new 'Digital Media' division was formed that included Axel Springer's online and broadcasting activities *independent* of existing print brands. *'[Axel Springer's] objective is clear: we want to realize a new dimension in the development of the company through digitization'*, Döpfner explained. *'[...] The European media business is undergoing digitalizing. And the want to be the winners.'*¹² At the outset of this reorganization, the Digital Media division accounted for around 5.9% of the company's total revenues. Pro forma online revenues across all cross-divisions – reported for the first time as a 'key company figure' – had grown to 8.1%, i.e. 38.6% higher than in 2006, to a total of € 221.7 million. As a point of reference, a key competitor such as Schibsted generated 29.7% of its revenues (42.9% of EBITA) from online activities.

Reaping the benefits of early anti-cyclical investments: Digital takes the lead (2008-2012)

Amid difficult economic conditions, between 2008 and 2012 Axel Springer further consolidated its competitive and financial position, implementing its diversification strategy in foreign markets and digital businesses with several incremental initiatives of corporate development (see Appendix 2). Döpfner described the core business as *‘not producing printed paper, but excellent journalism. [...] We are linking the different worlds together by building networks and transcending media boundaries... to be the best-integrated and most customer-friendly media company in Europe.’*¹³ Counter to industry trends, Axel Springer’s headcount remained mostly stable and employees also enjoyed a bonus share scheme and a share ownership programme.

The year 2008 was another record one for the company. At a time when publishers such as Haymarket Media Group,¹⁴ Schibsted,¹⁵ and others were issuing profit warnings amid substantially lower advertising revenues, Axel Springer announced the highest earnings in its history with an EBITDA of € 486.2 million, revenues up 5.8% to approximately € 2.7 billion, and a record dividend of € 4.40. Some of this came from the timing of the sale of its stake in *ProSieben SAT.1 Media* in January 2008 for € 509.4 million: had the company waited until the end of 2008, the same stock would have been worth only € 63 million. However, the company’s performance was higher on both an adjusted and an unadjusted basis. Early moves to reduce the weight of advertising revenues were paying off. Compared with global competitors where advertising generated anywhere between 55-80% of revenues, advertising accounted for only 45.7% for Axel Springer out of which just 18% came from classified ads versus an

average of 56% for competitors. The company was thus less affected by cyclical trends, the financial crisis and the digitization of these revenue streams.

The Digital Media division was now worth 13.9% (€ 383 million) of the Group's total consolidated revenues, up 26.1% on 2007, and 14% on a pro forma basis.¹⁶ Important milestones had been the acquisition of a 94.8% majority stake in *Gamigo*, a rising online videogames platform with over one million subscribers, and the acquisition of a 33.3% stake in the Norwegian company *StepStone ASA*, a provider of online talent-management software. In Germany, the company acquired from OnVista Media *onmeda.de*, a portal dedicated to premium information on health themes. It also increased its stake in *Smarthouse Media* to 88%, in *Wallstreet: Online* to 71.9%, and acquired a majority stake of 51% in *Transfermarkt.de*, Germany's largest online soccer community. Abroad, Axel Springer acquired *Avivum*, a company operating leisure and lifestyle portals in Switzerland. Further attention was then paid to strengthen *Welt Online*, which achieved 173.6 million page impressions and positioned itself as the fastest-growing digital news portal. As well as this, the company consolidated *Bild*'s editorial offices in Berlin to foster the collaboration between online and print editorial teams on multimedia content delivery. Results included *4242*, a service for downloading videos via *BILDmobil*, and the introduction of the 'reader reporter video camera', i.e. a user-generated content feature allowing readers to submit their mobile-camera pictures and videos for paid-publication on *Bild.de*.

In 2009, Digital Media grew further by 4.7% achieving pro forma revenues equal to 21% (€ 569 million) of the company's total revenues of approximately € 2.6 billion, down 4.3% year-on-year. The ambitious goal of € 400 million in digital revenues outlined in 2007 had been achieved one year earlier than forecast. The company's digital reach had grown to 24.7 million unique visitors. Its competitive leadership was

widening fast and the company was acutely aware of it. Döpfner opened the yearly letter to the shareholders arguing: *‘It makes sense to weatherproof your house before storm hits. And that is exactly what we at Axel Springer have been doing intensively in the last seven years, why we have built up the digital business of the future and reorganized our existing activities.’*¹⁷

The rest of the year was rich in small acquisitions that could complement the company’s digital strategy portfolio seamlessly. For the first time, Axel Springer’s digital strategy was formulated as being focused on three types of businesses: Marketplaces, Performance-based Marketing Platforms, and Market-leading Content Portals. In Marketplaces, where *Idealo.de* and *Immonet.de* were already leaders, Axel Springer completed the 100% takeover of *StepStone ASA*. In Marketing Platforms, where *Zanox.de* was an influential global player, it started pursuing a strategy of accelerated international growth by acquiring *Digital Window*, a well-positioned affiliate network in the UK. Finally, due to the high volatility and long-term decline of advertising revenues, Axel Springer explored additional revenue streams in the digital world. For example, it launched its first subscription-based models and smartphone applications for key brands such as *Bild*, attracting more than 100,000 paying users by the end of the year.

During 2010, Axel Springer intensified the implementation of its digital strategy in international markets. Döpfner explained: *‘One of the most important factors contributing to the success of our business is the decision we made many years ago to energetically pursue a policy of systematic digital transformation, which is closely tied to the internationalization of our business’*.¹⁸ Across the board, particularly important was the formation of a joint venture with the Swiss publisher Ringier to expand both companies’ Eastern European media activities. The joint venture obtained, for example,

a strong position in the Slovakian online market by acquiring a 70% interest in the country's leading online portal *Azet.sk*. Other important digital investments included the acquisition of *Perfiliate Ltd (buy.at)* through *Digital Window* to strengthen the company's position in Great Britain and access the United States as well as a 12.4% equity interest in *SeLogger.com*, an important real estate portal in France. In the same year, Axel Springer entered India through a 52.1% stake in *Carwale.com*, a large classified ad portal for automobiles, and a 19.1% stake in the lifestyle marketplace *BagItToday.com*. As part of its digital effort in international markets, the company launched the mobile brand *iGourmand* for which an app was distributed in France, Great Britain, the US and Germany. At the end of the year, the EBITDA of Axel Springer reached a new record level of € 510.6 million, corresponding to 17.6% of its € 2.9 billion in revenues. The share price outperformed the relevant comparison indices by a wide margin, closing the year at € 122.00 from the initial € 75.05 (see Figure 2) and shareholders received their highest dividend to date equal to € 4.80.

The Digital Media division had been very active and performed extremely well with pro forma digital revenues up 24.4% to € 766 million. For the first time, Axel Springer had become the largest digital player by revenues among European print publishers (see Figure 3). Döpfner declared that the company's new ambitious goal was to generate half of its total revenues from digital media channels by 2017. In his words, there was increasing recognition of the growing pervasiveness of digitization and that '*content and journalism... are still the crucial prerequisite for the success of any publishing company [...] this truth is sometimes forgotten. [...] That holds true in the analog world and most certainly in the digital world.*'¹⁹ All the company's divisions performed very well again. Editorial online offerings, in particular, enjoyed significant growth achieved via novel revenue sources such as the advertising-financed movie portal *Bild Kino* or

the offering of soccer videos in co-operation with the pay-TV broadcast company Sky. *Aufeminin.com*, already Europe's biggest women's portal, increased its reach considerably thanks to initiatives such as the launch of *Aufeminin.tv*, Europe's first web-TV channel for women. Some reorganization, however, was conducted with respect to its financial offerings. For example, the portal *Finanzen.net*, formerly operated by *Smarthouse Media*, was repositioned as an independent online company whereas the *Solutions* division of *StepStone* as well as participations in *Wallstreet: Online* and *Wallstreet: Online Capital* were all divested due to lack of economic prospects.

In 2011, Axel Springer broke another record for financial performance with revenues of approximately € 3.2 billion and EBITDA of € 593 million. It also ranked 16th among the most popular websites behind Google, Facebook, Amazon and eBay. For the first time, more than 30% of total Group pro forma revenues were generated by digital media, equivalent to nearly € 1 billion (€ 984 million), with a 16.4% EBITDA margin. Axel Springer's focus was on creating strong content to increase its portals' market share. *Aufeminin.com*, for instance, acquired *Netmums.com*, the leading British website for content related to children and parenting. Good progress was also made in the development of paid content for smartphones and tablets, for example with the introduction of an Android-compatible app for AutoBild, immonet, autoplus.fr and zanox as well as the expansion of Die Welt and Welt am Sonntag content to Android and Kindle-compatible formats.

In Marketplaces, Axel Springer's investments included increasing its stake in the French online real estate portal *SeLoger.com* to 98.7%. Through *SeLoger.com*, it then acquired a 17.3% stake in *iProperty Group*, an Australian-based network of real estate portals in South East Asia, and it also bought full equity of the French online portal for

vacation properties *a-gites.com*. In parallel, *StepStone* acquired the technology company *Jobanova* and used its technology capabilities to create a new search algorithm for job listings, *StepMatch*, that was then launched in Germany, France, the Netherlands and Norway. Growth was also pursued organically and via partnerships. For instance, *Immonet.de* broadened its offering with the launch of *ImmonetManager*, a mobile brokerage software program for real estate administering services, and it extended its residential listings thanks to the collaboration with eBay. In Online Marketing, Axel Springer purchased (via *Zanox.de*) all the shares of the Dutch affiliate network *M4N*, thereby obtaining market leadership in the Benelux countries. It also acquired a 77.7% stake in *Visual Meta*, a company operating shopping portals such as *Ladenzeile.de* in seven European countries. Finally, towards the end of the year, it launched *Zanox Marketplace*, the first European marketplace for performance advertising. The acquisition of a majority stake in *Juno Internet*, the company behind the fast-growing German portal for online brochures, couponing and local shopping *KaufDA*, was also completed and led to the launch of the online platform *Bonial.fr* in France.

In 2012, the transition towards full digitization progressed fast and by the end of the year the goal of the company had morphed into becoming ‘the leading digital media group’ in Europe. In his Letter to the Shareholders, Döpfner explained his vision as follows: ‘*The Internet is the greatest invention in the history of civilization since language, writing, and printing. [...] We need to be concerned with protecting the future of quality journalism, whether print or online. Therefore, newspapers must be emancipated from paper as a carrier medium.*’²⁰ Digital revenues passed the € 1 billion mark for the first time and were worth 37.2% of the Group’s total revenues, +25.1% on 2011, and 38.7% of its EBITDA. The most important results came from content portals

and digital classifieds, whereas the performance marketing segment pursued incremental growth. *Aufeminin.com*, for example, extended into 14 countries and acquired *Etoile Casting*, an online casting agency connecting artists with thousands of professional partners. Other important acquisitions were content portals such as *Onet.pl* in Poland and *Azet.sk* in Slovakia as well as the Serbian car marketplace *Mojauto.rs* and real estate website *Nekretnine.rs*. Axel Springer also launched *Finanzen.net* in Austria, Switzerland and the UK while *KaufDA* was internationalized further in Spain, Russia and Brazil. In India, *Carwale.com* expanded with a new portal for motorcycle riders, *Bikewale.com*. In digital classifieds, the main change was the creation of Axel Springer Digital Classifieds with a 30% stake owned by the global growth investor General Atlantic. Axel Springer's most important classified portals were all consolidated as part of the new entity and led to the acquisition of *Totaljobs* (via Stepstone), the UK's biggest online recruiting company; of *Allesklar.com*, the operator of Germany's most important regional information portal *Meinestadt.de*; and of *Immoweb.be* (via *SeLogger.com*), the leading online real estate portal in Belgium.

Phase 3 – Journalism back to centre stage in a digitized word (2013-early 2014)

In 2013, Axel Springer announced a number of reconfiguration initiatives to accelerate and deepen its digital transformation. After years of consistent growth, the goal of achieving a perfect 50% balance with the legacy print business was closer than ever. The board thus allocated between € 600 million-900 million for investments to further drive digitization on the top of the additional € 1 billion from partners and founders.²¹ With this investment firepower, Axel Springer started looking for companies with emergent business models, rather than for established (and profitable) ones. The

company decided to establish a presence in Silicon Valley in the US via direct engagements in a number of projects and in co-operation with *PlugandPlayTechCenter.com*, a digitally-orientated accelerator. It also created a unit dedicated to strategic product development (*Axel Springer Ideas*) and a programme aimed at nurturing creative talents in media (*Axel Springer Media Entrepreneurs*). It then invested in an early-stage conference format in Berlin (*Hy!Berlin*) and in a start-up focused on aggregation, filtering and selection of photos (*Pixlee*). ‘*Against the background of structurally caused [advertising] revenue decline...*’, Döpfner argued, ‘*[...] we are accelerating the pace of [our transformation] ... We are weatherproofing our company with great determination [...]. We do not fear the future, or the fundamental changes the media business is facing. We want to emerge from this revolution as a winner*’.²²

For the first time since 2001, reflecting the increasing digitization of its business, Axel Springer revised the structure of its divisions around different customer groups and monetization models: Paid Models; Marketing Models; Classified Ad Models. The new strategic framework recognized ‘dedicated journalism’ as the core competence of Axel Springer and the foundation of long-term profitability (Figure 4). Digital technology had come to be perceived as pervasive and no longer requiring a ‘special’ transition strategy. ‘*We monetize journalism in the digital world in the same way we have done in the analog world for decades*’, Döpfner observed, ‘*by relying on three sources of revenues: the paying reader, the advertising customer, and the classified ad customer. From now on, you will see this revenue structure reflected in our revised [division] structure*’.²³ In terms of performance, digital activities accounted (pro forma) for 47.9% (€ 1.35 billion) of the Group’s total revenues and for 61.8% of its EBITDA,

substantially up from 2012. Axel Springer distributed another record dividend and its share price increased to € 46.70, up 44.6% on 2012.

The reorganization brought important changes, such as the full sale of Axel Springer's German regional newspapers, women's magazines and TV programme guides to Funke Mediengruppe plus other divestments of printed newspapers and magazines outside Germany (see Appendix 2). At the same time, believing in video content as the central element of video journalism, the company successfully acquired the TV news station *N24*, finally offsetting the failed acquisition of *ProSiebenSat.1*. Other key corporate initiatives in Paid Models were the acquisition of a 75.1% stake in *TunedIn Media*, a social media start-up focused on digital TV; a majority stake investment of 50.1% in *Runtastic*, the world leading provider of mobile apps for the measurement of sport and fitness data; and the acquisition of a 37.5% stake in *Project A Ventures*, a company builder focusing on the Internet, advertising technology and mobile. In June, the Company launched *BILDPlus*, a new freemium offering for its best-selling tabloid with free news but paid premium journalistic content. *BILDPlus* hit a very strong start when compared to international peers (Figure 5).

The Marketing Models division, instead, was sub-divided into 'performance-based' and 'reach-based' portfolios. Part of the former, *zanox.de* expanded its presence in real-time advertising with a majority stake of 56.1% in the performance display provider *Metrigo*, a company focused on performance display and real-time bidding. As part of a series of initiatives in reach-based marketing activities, *Aufeminin.com* – already the European market leader in web portals devoted to fashion, beauty and lifestyle – acquired a 60% stake in the French newsletter-based women's portal *Mylittleparis.com* and a 100% stake in the French lifestyle portal *Merci Alfred*. Finally, in Classified Ad Models, *StepStone* acquired *Saongroup*, a company operating job portals in 16

countries with strong market positions in Ireland, Northern Ireland and South Africa, and *YourCareerGroup*, a company running several online portals with a focus on hotels, restaurants and tourism in countries such as Germany, Austria and Switzerland.

A dozen years after Döpfner's appointment as CEO, most voices agreed that the turnaround and pioneering strategies pursued by Axel Springer in digital technology had succeed in expanding its lead over competitors. All in all, Axel Springer's strategic transformation into a digital media powerhouse seemed to be well on track and promised even more fruitful results. In the digital media space, Axel Springer appeared in a very strong position compared to its international peers: for example, its total reach in unique visitors had further expanded in absolute and relative terms (see Table 2). Yet, as Döpfner openly acknowledged to shareholders, *'perhaps [we are in] pole position in the global competition... to become [the] leading and successful digital media compan[y] ... but it is only a pole position. The race, the true race has not really started yet'*.²⁴

Conclusive remarks

Axel Springer's historical case represents a quasi-ideal natural experiment (Diamond & Robinson, 2011) to analyse what matters for pursuing successful pioneering strategies (Suarez and Lanzolla, 2007; Lieberman and Montgomery, 1998) in the wake of the rapid and pervasive diffusion of digital technologies. As a matter of fact, digital technologies enable pervasive connectivity, immediacy of interactions and access to a wide range of data and computing power. Trying to navigate through the transformation triggered by these digital technologies, between 2002 and 2014 Axel Springer's top management team embarked on several pioneering investments inside and outside its legacy publishing core businesses.

Our historical analysis highlights three empirical ‘regularities’. First, Axel Springer’s pioneering efforts have been overall sustainable when entering markets related to its legacy core publishing and journalism-related competences. Yet, they have been rather *unsuccessful* when entering *unrelated* markets (as witnessed by the number of divestment decisions that Axel Springer made for such ventures – see Appendix 1 and Appendix 2). A major reason for these divergent outcomes is the fact that, despite a common digital technology denominator, the core competences required to thrive in industries such as media, advertising, real estate and job search remained inherently different, resulting in strategic and managerial complexities that are hard to overcome (Lanzolla and Anderson, 2010). In other words, our study suggests that the diffusion of digital technologies does not necessarily influence the degree to which a firm’s core competence can be stretched and that, therefore, the potential for FMA is likely to be bounded to specific core competency domains. The consequence is that current FMA research focused on macro-level factors (e.g. Suarez and Lanzolla, 2007, 2008) could be advanced by formally incorporating as a key moderator for entry timing performance the level of fit between the capabilities necessary in markets that are being pioneered and firms’ legacy core competences.

Second, we complement the micro-side of FMA research by showing that, despite the challenges, Axel Springer’s pioneering efforts in peripheral domains proved to be very important for the long-term sustainability of FMA in the core business (journalism and publishing). They were in fact functional to the development of those knowledge integration capabilities necessary to dynamically adapt to the new ‘ecology’ created by the diffusion of digital technologies. Prior research suggests that top management teams can drive the successful transformation of their firms in response to market or technology shifts by refining the core business incrementally while pursuing novel

business opportunities as completely separate efforts reinforced (Gilbert et al., 2012; Harrell, O'Reilly and Tushman, 2007). Our study extends this line of inquiry by highlighting that the benefits (and costs) of dual transformation efforts are contingent on each firm's competence domain. It also emphasizes that top management teams bear the responsibility of building knowledge integration capabilities by establishing and orchestrating learning mechanisms between core and peripheral businesses that take into account the long-term sustainability of the core business's FMA.

Third, we found that Axel Springer's pioneering strategies were shaped by the changes in top management's conceptualization of the evolving applicability scope of digital technologies (Table 3). At the beginning of our case, Axel Springer's senior management tended to perceive digital technology in terms of its contribution to the company's broader distribution strategy, in line with competitors such as Bertelsman, Schibsted and Sanoma. Over time, such conceptualization evolved to a point in which digital stopped being a dedicated strategy to become pervasive across all business lines. The comparison of Figure 1 and Figure 4 illustrates this point. While in Figure 1 'digitization' appears as a standalone strategy, in Figure 4 digital technologies are now present in the corporate strategy framework as pervasive enablers of all Axel Springer strategies which spring off the company's journalism core competence. The importance of this evolving conceptualization unveils the need to account for an additional level of analysis in FMA research, that of managerial cognitive capabilities (Helfat and Peteraf, 2014; Jones et al., 2013). Recent research has started to recognize that 'for managers faced with the need to develop and implement strategic change, [cognitive capabilities] are likely to hold particular importance' (Helfat and Peteraf, 2014: 845). Our study is arguably one of the first studies to provide empirical evidence of these managerial cognitive capabilities in relation to shaping sustainable FMA. Figure 6²⁵ shows that

Axel Springer also outperformed its peers in terms of corporate and managerial attention dedicated to digitization throughout the whole period of this case.

In conclusion, our case contributes to business history literature by providing a detailed account of how Axel Springer, currently one of the most relevant digital media powerhouses in Europe, dynamically managed the inter-temporal transformations enacted in the media industry by the digital revolution. It did so while renewing and extending its pioneering advantages in the core legacy journalism business. Despite the limitations of our historical case study research in the form of limited time span of analysis as well as our reliance on (detailed) archival evidence, our work extends FMA research by showing why the applicability scope of new technologies as well as the market-core competence fit should be included as additional contingencies when investigating entry timing performance. We have also provided evidence of the importance of learning investments in peripheral domains to develop the capabilities necessary to protect the sustainability of FMA in the core legacy business. Central to our findings is the role played by the cognitive capabilities of Axel Springer's top management team – a previously overlooked individual-level enabler in FMA research – in anticipating digital technology evolution both in pace and applicability scope. We believe that FMA research can be significantly advanced with the formal incorporation of managerial cognitive capabilities as the central enabler linking current macro and micro perspectives, particularly in regimes of rapidly evolving and expanding technological change.

²⁵ In line with established research on corporate and managerial attention (e.g., Cho & Hambrick, 2006; Eggers & Kaplan, 2009; see for a review Helfat and Martin, 2014), Figure 6 is based on a content analysis of Companies’ annual reports. Managerial attention was calculated as the cumulative number of times the keyword(s) ‘digit*’ appeared in the annual Letter to Shareholders whereas corporate attention as the cumulative use of the same keyword(s) in each Annual Report. We excluded the use of the keyword in subsidiaries’ names.
